PROJECT TITLE		Job Portal Website		

ABSTRACT:

In today's fast-paced digital world, both job seekers and employers often struggle to find the right matches efficiently. Traditional job search methods can be slow and frustrating, leading to dissatisfaction for everyone involved. Job portals were created to solve this problem by providing a centralized platform for job listings and applications. However, many current portals have issues like complicated navigation, limited search options, and lack of personalized job suggestions. This project aims to create a user-friendly job portal website that addresses these challenges. By using modern technology, the portal will improve the job search experience for seekers and offer useful tools for employers. Key features will include advanced search filters, user profiles, application tracking, and a responsive design to ensure that the portal works well on all devices. Ultimately, our goal is to make the job market more efficient, helping individuals find the right opportunities and enabling companies to attract the best talent.

OBJECTIVES:

- User Registration: Enable users to create and manage profiles for job seekers and employers.
- Job Posting: Allow employers to post job vacancies easily with detailed descriptions.
- Search Functionality: Implement advanced search and filtering options for job seekers to find relevant jobs.
- Responsive Design: Ensure the portal is accessible on various devices, including mobile phones and tablets.
- User Feedback: Integrate a feedback mechanism to continuously improve the portal based on user experience.

REQUIREMENT SPECIFICATION:

Minimum Hardware Requirement specification:

- **Processor (CPU):**
 - Minimum: Dual-core processor (2.0 GHz or higher)
 - Recommended: Quad-core processor (3.0 GHz or higher)
- **Memory (RAM):**
 - Minimum: 4 GB
 - Recommended: 8 GB or more for better performance
- **Storage:**
 - Minimum: 100 GB SSD (Solid State Drive) for faster read/write speeds
 - Recommended: 256 GB or more for increased data handling and scalability
- **Network:**
 - Minimum: 1 Gbps Ethernet connection
 - Recommended: 10 Gbps for handling multiple simultaneous connections

Minimum Software Requirement Specification:

- HTML
- CSS
- JavaScript
